

Simplified Entity Relationship Diagram (ERD) of HusbandrySystem model

Jaime Hyland | January 23, 2025

The HusbandrySystem model has no foreign keys. It's essentially a list of Husbandry systems for which the Mellifera project has articles in stock.

However, some of the product records in the Mellifera range have a HusbandrySystem associated with them in order to provide information on which husbandry system they are compatible with.

The user then has the option of filtering out all systems incompatible with the one they are using in order to prevent them from buying an article with the wrong dimensions.

When set to a husbandry system, the filter shows all products associated with that system and all products not associated with any husbandry system, thus leaving out only products incompatible with the system selected for the filter.

The dimensions are for information only. They are not relevant to the functioning of the HusbandrySystem in this iteration of the Mellifera Project.
